Report Overview

Alkyl ethoxy polyglycosides(AEG) are improved version of alkyl polyglucoside (APG) by introducing the polyoxyethylene chain between the alkyl chain and Polyglycosides group. Just like the difference between alkyl sulfate sodium (AS) and sodium alcohol ether sulphate (AES), it is the update of APG. AEG belongs to a new kind of green nonionic-surfactant with self-owned intellectual property right.

AEG has moisturizing and skin care effects, can significantly reduce the irritation of the overall formula, has good low-temperature water solubility, hard water resistance, and has a good viscosity-increasing effect on the formulation system. It can be compounded with various active substances. It has stable chemical properties and is harmful to the human body and the environment. Safety. The raw material cost and product price of AEG are lower than APG, and it is a new and versatile green surfactant with higher cost performance and wider application fields.
