Abstracts

All-ceramic teeth, also known as all-ceramic crowns, are porcelain restorations that cover the entire crown surface and do not contain metal crowns. Because the inner crown no longer uses metal, but is made of high-strength porcelain material similar in color to the teeth, it is more beautiful than the metal-based porcelain restoration. The translucency is similar to that of natural teeth. The gingival edge appears more natural after restoration, and can achieve Simulation effect.According to our research, the global market for medical devices is estimated at US$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years.
