## Abstracts

An All-electric Glass Furnace is a glass-melting furnace that uses only electrical energy to heat and melt raw materials, eliminating the need for fossil fuels. It operates through Joule heating, where electrodes placed inside the furnace generate heat by passing an electric current through the molten glass. This technology offers several advantages, including higher energy efficiency, lower CO<sub>2</sub> emissions, precise temperature control, and reduced environmental impact compared to conventional gas-fired furnaces. All-electric furnaces are commonly used in specialty glass production, such as optical glass, pharmaceutical glass, and high-purity glass, where contamination control is critical.

The global All-electric Glass Furnace market size was estimated at USD 112.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
