## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on All-in-one Smart Central Control Panel competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Smart Central Control Panel refers to the central control system used in the home, which integrates the control functions of various indoor devices into the central control system. The device is controlled through the panel, connecting smart lighting, audio and video systems, switches, sockets, door locks, smart appliances and other devices and systems, and uses wireless mode and remote control to achieve one-click control of intelligent products. With the rapid development of the Internet of Things (IoT), artificial intelligence (AI) and 5G technology, the global smart central control screen market is in a period of rapid growth, with home intelligence and all-scenario Internet of Things (AIoT) as the core driving forces. The main drivers of market growth include: The wave of automotive intelligence: The surge in demand for smart homes: The promotion of whole-house smart systems has made home central control screens the control center of smart speakers, security, lighting and other equipment. Industry 4.0 upgrade: The demand for manufacturing automation has driven the evolution of industrial control screens towards intelligence, low latency and high reliability, and has been applied to scenarios such as robotic arms and AGVs (automatic guided vehicles). The demand for interactive smart screens has increased in retail, medical care, education and other fields. However, the market still faces risks and challenges: Supply chain risks: High-end chips and display panels (OLED) rely on a few suppliers, and geopolitics may affect stable supply. Data security and privacy issues: Car and home central control screens involve user behavior data and must comply with GDPR (EU), Personal Information Protection Law and other regulations. Price wars and low-end market competition: Chinese white-label manufacturers have lowered profits, affecting

the premium ability of high-end brands. The global Smart Central Control Panel market presents a pattern of "Asia-Pacific dominance, high-end Europe and the United States, and great potential in emerging markets": China is the world's largest producer and consumer of Smart Central Control Panel, benefiting from the explosive growth of new energy vehicles and smart homes. Japan and South Korea take the lead in high-end car screens and OLED technology. Southeast Asia (India, Vietnam) has become an important destination for supply chain transfer with its low-cost manufacturing and rising demand for consumer electronics. The market presents a pattern of "head companies dominating sub-sectors + differentiated competition among emerging manufacturers". The future focus of competition will be on software ecology (such as Hongmeng OS), interactive technology innovation (AR/VR integration) and supply chain localization.

The global All-in-one Smart Central Control Panel market size was estimated at USD 1533.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
