The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on All-Metal Locknuts competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. All-metal locknuts are specialized fasteners that achieve vibration-resistant locking without the use of non-metallic inserts. They rely entirely on their metal construction through structural features such as deformation, eccentricity, slits, or wedge mechanisms to generate friction or mechanical interference in the thread engagement.
