Abstracts

All natural film formers are polymeric substances derived entirely from renewable and naturally occurring resources such as plant-based polysaccharides (e.g., cellulose, starch, alginate), proteins (e.g., whey, soy, zein), gums (e.g., xanthan, guar), and certain resins or waxes, which are capable of forming a continuous, cohesive, and often flexible layer when applied to a surface, providing functions such as moisture retention, protection, stabilization, or controlled release without the use of synthetic polymers or petroleum-derived ingredients. These materials are increasingly favored in industries like cosmetics, food packaging, pharmaceuticals, and agriculture due to growing consumer demand for sustainable, biodegradable, and non-toxic alternatives to conventional synthetic film formers, aligning with broader environmental and health-conscious trends.

The global All Natural Film Formers market size was estimated at USD 350.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
