Report Overview

The all-solid-state LiDAR chip is a compact semiconductor device that integrates transmission, reception and signal processing functions, and is dedicated to LiDAR systems. Compared with traditional mechanical rotating LiDARs, all-solid-state LiDAR chips have no moving parts, so they are more durable, reliable, and have higher resolution and scanning speed. This chip uses solid-state electronic components (such as phased arrays or optical phased arrays) to achieve the transmission and reception of laser beams. It is widely used in fields such as autonomous driving, robots, drones, and smart security, significantly improving the accuracy and efficiency of environmental perception and spatial mapping.
