## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on All-steel Test Bench competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An all-steel lab bench is a laboratory workbench constructed primarily of cold-rolled steel or stainless steel. Its frame, columns, beams, cabinet, and panels are all constructed of metal. The surface is treated with pickling and phosphating, electrostatic spraying, or passivation. It offers advantages such as high strength, load-bearing capacity, fire resistance, moisture resistance, corrosion resistance, and a long service life. The benchtop is typically available with a choice of solid chemistry board, epoxy resin board, ceramic board, or stainless steel board to suit the needs of different laboratory environments. With its stable overall structure and easy cleaning and maintenance, all-steel lab benches are widely used in industrial laboratories, pharmaceutical and chemical industries, quality inspection facilities, and demanding scientific research environments. They are particularly suitable for environments subject to humidity, high temperatures, or high safety standards. In 2024, the global production of all-steel test benches will reach 300,830 units, with an average selling price of US\$360 per unit.

The global All-steel Test Bench market size was estimated at USD 108.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
