Abstracts

The all-terrain telehandler, also known as an all-terrain telescopic handler or rough-terrain telehandler, is a versatile piece of heavy equipment designed for lifting, placing, and transporting materials across challenging and uneven landscapes where standard telehandlers or forklifts would be ineffective. It combines the functionalities of a crane, forklift, and personnel lift, featuring a telescoping boom that extends both horizontally and vertically, along with four-wheel drive, enhanced ground clearance, robust suspension systems, and specialized tires to maintain stability and traction on soft, muddy, rocky, or sloped terrain. These machines are commonly used with various attachments such as forks, buckets, winches, or work platforms, making them indispensable in industries like construction, agriculture, mining, forestry, and infrastructure development where access and maneuverability in off-road conditions are critical.

The global All Terrain Telehandler market size was estimated at USD 2850.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
