## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Allyl 2,3-epoxypropyl Ether competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Allyl 2,3-epoxypropyl ether reached approximately 240 kilotons, with an average global market price of around USD 890 per ton. Allyl 2,3-epoxypropyl ether is consisting of an allyl group ( $\text{CH}_2=\text{CH}-\text{CH}_2$ ) linked to a glycidyl ether moiety containing an epoxide ring. It is a clear, colorless liquid with a characteristic odor, valued for its bifunctional reactivity?its allyl group can undergo polymerization or addition reactions, while its epoxide ring can participate in nucleophilic ring-opening reactions. This dual reactivity makes it a versatile intermediate in producing specialty polymers, epoxy resins, crosslinking agents, and elastomers, as well as in surface modification and adhesion enhancement applications. It is typically handled with caution due to its flammability and potential irritant properties. The key market drivers for Allyl 2,3-epoxypropyl ether (Allyl Glycidyl Ether, AGE) stem from its unique bifunctional reactivity, which makes it highly valuable in the production of specialty polymers, epoxy resins, and elastomers with enhanced chemical resistance, flexibility, and adhesion properties. Rising demand from the coatings, adhesives, and sealants sectors?particularly in automotive, aerospace, marine, and construction industries?boosts consumption, as AGE enables improved crosslinking and surface bonding. Growth in electronics manufacturing also drives demand, as it is used in high-performance insulating materials and circuit board components. Furthermore, the expansion of wind energy and industrial composites markets, coupled with the trend toward lightweight, high-strength materials, supports market growth. Increasing investments in advanced materials for corrosion protection, as well as regulatory emphasis on durable and long-lasting infrastructure, further accelerate the need for

AGE-based formulations.

The global Allyl 2,3-epoxypropyl Ether market size was estimated at USD 213.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
