Abstracts

Alnico permanent magnets are a class of strong, metallic magnets composed primarily of aluminum (Al), nickel (Ni), and cobalt (Co), often with small additions of iron, copper, and titanium to optimize magnetic and mechanical properties. Distinguished by their high magnetic strength, excellent temperature stability (retaining performance up to 550°C), and superior resistance to demagnetization, they are widely used in applications requiring reliable performance under harsh conditions, such as electric motors, sensors, meters, loudspeakers, and specialized industrial equipment where alternative magnet types like neodymium or ferrite may falter due to thermal or corrosion constraints.

The global Alnico Permanent Magnets market size was estimated at USD 405.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.85% during the forecast period.
