Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Alpine Touring Boots competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of alpine touring boots will reach approximately 1.24 million pairs, with an average price of approximately US\$520 per pair and an industry-wide gross profit margin of 35%-40%. These boots are specialized footwear designed for ski mountaineering and off-piste skiing, balancing lightweightness with rigidity. They typically feature a carbon fiber-reinforced shell, a replaceable buckle system, and a high-grip rubber sole. These boots efficiently transmit power through ski bindings while supporting flexible walking and climbing in mountaineering mode. Recent technological trends, including lightweight shell composites, optimized thermal and breathable composite linings, and enhanced compatibility with smart bindings, have driven continued growth in the high-end market. The upstream supply chain primarily relies on raw materials such as carbon fiber, thermoplastic polyurethane (TPU), high-performance foam, and rubber outsoles, while the downstream supply chain encompasses ski equipment retailers, outdoor sports chains, and ski resort rental systems. Scarpa, a leading global brand, has an annual production capacity of approximately 180,000-200,000 pairs, with alpine touring boots accounting for over 40% of this, making it a strong competitor in the European and North American markets.

The global Alpine Touring Boots market size was estimated at USD 644.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
