Abstracts

An alu-plastic liner bag is a specialized packaging solution that combines the properties of aluminum and plastic materials to create a multi-layered structure with enhanced functionality. Typically, the inner layer is made of a food-grade plastic, often polyethylene or polypropylene, which is in direct contact with the contents, providing a hygienic and inert surface that ensures the safety and integrity of the product. The outer layer or intermediate layers incorporate aluminum foil, which imparts excellent barrier properties against light, oxygen, moisture, and odors. This combination makes alu-plastic liner bags highly effective in preserving the quality, freshness, and flavor of products, whether they are food items like snacks, coffee, tea, and powdered foods, or industrial products such as chemicals that are sensitive to environmental factors. These bags are usually flexible and can be customized in size and shape to fit various containers or packaging requirements, and they are often sealed with heat-sealing or other closure methods to maintain the protective barrier.

The global Alu-Plastic Liner Bag market size was estimated at USD 937.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
