Abstracts

Aluminium boat cradles are specialized support structures designed to securely hold and protect boats during storage, transport, or maintenance, typically constructed from lightweight yet durable aluminium alloys that offer corrosion resistance, especially in marine environments. These cradles are engineered to distribute the weight of the vessel evenly, minimizing stress on the hull and preventing deformation, and often feature adjustable arms, padding, or custom fittings to accommodate various boat sizes and types, from small personal watercraft to larger yachts. Their modular or customizable nature allows for flexibility in application, whether for use in boatyards, marinas, or by individual owners seeking a reliable, long-term storage solution that combines portability with structural integrity.
