## Abstracts

In the electrical wiring of buildings, a cable tray system is used to support insulated electrical cables used for power distribution, control, and communication. Aluminum cable trays are widely known for their lightweight and durable nature. Their low weight makes them easy to install, reducing both labor and transportation costs. Being non-magnetic, aluminum trays are particularly useful in areas where electromagnetic interference may cause issues. They are also naturally resistant to corrosion, thanks to the formation of a protective oxide layer on their surface. This quality makes them suitable for outdoor applications, as they can withstand harsh weather conditions, including UV radiation. Additionally, aluminum cable trays often have a smooth and aesthetic finish, making them a visually appealing choice for many installations. Asia-Pacific is the largest consumption region, followed by North America and Europe.

The global Aluminium Cable Tray Systems market size was estimated at USD 787.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
