## Abstracts

Aluminum chloride is a chemical compound with the formula  $AlCl_3$ . It's a white or pale yellow solid that's highly hygroscopic, meaning it readily absorbs moisture from the air. It exists in anhydrous (without water) and hydrated forms. Aluminum chloride is a versatile chemical used in various industrial applications, primarily as a catalyst in organic synthesis. It's also used in water treatment, the production of aluminum metal, and in some pharmaceutical and cosmetic applications. Due to its Lewis acid properties, it readily reacts with many substances. The aluminum chloride industry is seeing trends influenced by environmental regulations and technological advancements. A significant driver is the increasing demand for effective water treatment solutions, pushing for higher purity aluminum chloride and its derivatives like polyaluminum chloride (PAC). This is especially relevant in regions facing water scarcity and stricter environmental standards. Simultaneously, there's a growing focus on sustainable production practices, with manufacturers exploring methods to reduce waste and energy consumption. The pharmaceutical and chemical synthesis sectors continue to rely on aluminum chloride as a crucial catalyst, with a trend toward developing more efficient and selective catalytic processes. Furthermore, the rising production of aluminum metal, although having various production methods, still uses aluminum chloride in some processes, so that also has influences on the market. The development of high-purity aluminum chloride for specialized applications, such as in advanced materials and electronics, is also a growing trend. Finally, market growth is also effected by the growth of the personal care product markets, as aluminum chloride is used in antiperspirants. In summary, the industry is adapting to meet the demands of diverse applications while prioritizing sustainability and innovation.

The global Aluminium Chloride market size was estimated at USD 316.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the

forecast period.
