Abstracts

Aluminium clad steel wire is a composite conductor material consisting of a high-strength steel core surrounded by a metallurgically bonded layer of aluminium, combining the mechanical robustness and fatigue resistance of steel with the electrical conductivity and corrosion resistance of aluminium. This hybrid wire is primarily utilized in overhead power transmission and distribution lines, grounding systems, and messenger support applications where a balance of tensile strength, weight efficiency, and electrical performance is required. It serves as a cost-effective alternative to all-aluminium alloy or all-copper conductors, particularly in long-span installations, coastal or corrosive environments, and regions prone to extreme weather conditions, offering enhanced durability and operational reliability.

The global Aluminium Clad Steel Wire market size was estimated at USD 458.3 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
