Abstracts

Aluminium cold forging services refer to a set of manufacturing processes that shape aluminium materials at room temperature or near - room temperature without additional heating. Aluminium has good ductility, which makes cold forging suitable for producing parts with high precision and tight tolerances. The formed parts have a smooth surface and high dimensional accuracy, requiring little or no further machining. The cold forging process is relatively simple and does not require heating the material, which saves time and increases production efficiency. It is suitable for mass production. It is a near-net-shape forming process that generates minimal waste, as the material is mainly deformed and not significantly cut or removed. This is beneficial for reducing production costs, especially for valuable aluminium alloys.

The global Aluminium Cold Forging Services market size was estimated at USD 1509.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60% during the forecast period.
