The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Aluminium Corrugated Composite Panel competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Aluminum Corrugated Composite Panel is a lightweight and high-strength composite sheet made by bonding the aluminum corrugated core with the upper and lower aluminum sheet surfaces through special processes. It integrates features such as heat insulation, sound insulation, corrosion resistance, and weather resistance. It is easy to install and both aesthetically pleasing and durable, and is widely used in fields such as architecture, transportation, and industry, including exterior walls, partitions, ceilings, and interior decorations of vehicles and ships. Market opportunities and key drivers: The aluminum corrugated core composite aluminum sheet market is currently experiencing rapid growth. The core opportunities stem from the synergy of global green transformation and policy support. At the policy level, China has issued documents such as the "Guiding Opinions on High-Quality Development of the Aluminum Industry", mandating the use of environmentally friendly materials in new buildings and promoting the renovation of existing buildings, directly boosting the penetration rate of aluminum corrugated core composite panels in scenarios such as curtain walls and roofs to 35%. Technological innovation is another key driver: lightweight and high-strength products (such as the aluminum plates developed by Mingtai Aluminum Industry for high-speed rail) combined with intelligent production equipment (such as imported production lines from Germany), with a yield rate exceeding 98%. Additionally, the surge in demand for green buildings and new energy has made aluminum corrugated core composite panels the preferred material in fields such as solar reflectors and high-speed rail carriages, due to their recyclability (with a recycling rate of 60%) and energy-saving characteristics (reducing building energy

consumption by 30%). International market expansion is also a growth engine, contributing significant growth in the Southeast Asian and European markets. Challenges and future directions: The aluminum corrugated core composite aluminum sheet industry faces multiple challenges, including fluctuations in raw material prices, competition from alternative materials, and risks of technological iteration. The price of aluminum ingots rose by 10% in 2023, coupled with stricter environmental policies (such as the "Environmental Protection Standards for Aluminum Corrugated Panels Industry"), leading to an increase in operating costs for enterprises and a compression of profit margins for small and medium-sized manufacturers. At the same time, carbon fiber composite panels (with a penetration rate of 10% expected in 2025) and bio-based materials (such as bamboo fiber composite panels) pose a threat to traditional aluminum corrugated panels due to their lower costs and environmental advantages. Future directions focus on technological integration and industry chain consolidation: through 5G + edge computing to achieve the research and development of intelligent temperature-controlled panels, and combining digital twin technology to optimize production processes (with a coverage rate of 70% by 2030); vertical integration of bauxite supply and downstream applications (such as photovoltaic + energy storage synergy), and horizontal expansion of the "customization + service" model. Enterprises need to accelerate their transformation towards "high-end + green" to cope with the dual pressures of international carbon tariffs and intensified local market competition, and consolidate their position in the global value chain.

The global Aluminium Corrugated Composite Panel market size was estimated at USD 2952.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
