## Abstracts

Aluminium foil recycling refers to the systematic process of collecting, sorting, cleaning, and reprocessing used aluminium foil products?such as food packaging, disposable containers, and household wraps?to recover the aluminium metal for reuse in manufacturing, thereby reducing waste, conserving energy, and minimizing the environmental impact associated with primary aluminium production. This process relies on consumer participation for proper disposal, involves specialized facilities to remove contaminants like food residues or mixed materials, and ultimately contributes to a circular economy by reintroducing reclaimed aluminium into the production cycle for new foil or other aluminium-based products.

The global Aluminium Foil Recycling market size was estimated at USD 1562.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
