Abstracts

Aluminium grey recycling refers to the process of recovering and reprocessing post-consumer and post-industrial aluminium scrap that has been treated or coated with grey-colored finishes, such as anodized aluminium, powder-coated aluminium, or aluminium components from automotive, construction, and consumer goods that feature grey surface treatments. This specialized segment of aluminium recycling involves separating the aluminium base metal from its coatings or contaminants through mechanical, thermal, or chemical processes to produce secondary aluminium that meets industry specifications for reuse in manufacturing. The value and complexity of recycling grey aluminium depend on the type and adherence of the coating, as well as the efficiency of decoating technologies, which impact both the economic viability and environmental benefits of the recycling loop.

The global Aluminium Grey Recycling market size was estimated at USD 43520.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
