## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Aluminium and Steel Solar Mounting Solutions competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Aluminium and Steel Solar Mounting Solutions are structural systems that form a critical part of a photovoltaic (PV) plant, providing mechanical support and fixation for PV modules through aluminium profiles and steel structures over the full design lifetime of the system, typically 25 years or more. Their primary requirements are: safety, meaning sufficient structural strength to withstand site-specific design loads such as wind, snow and seismic actions; serviceability, meaning adequate stiffness so that deflections and deformations under load remain within acceptable limits and do not affect normal power generation; and durability, meaning long-term resistance to oxidation and corrosion in outdoor environments so that coatings, fasteners and connections do not degrade prematurely. In addition, these mounting solutions must be engineered for easy installation and convenient maintenance on site, often combining lightweight aluminium components with high-strength, cost-effective steel members to achieve an optimal balance of safety, applicability and long-term performance. Along the value chain, Aluminium and Steel Solar Mounting Solutions belong to the PV balance-of-system segment: upstream are suppliers of aluminium ingots and extrusions, galvanised or stainless steel sections, fasteners and surface-treatment services such as anodizing and hot-dip galvanizing; midstream companies design the racking, fabricate and pre-assemble profiles into mounting kits; downstream, EPC contractors and installers integrate these kits into residential, C&I and utility-scale PV plants. In mainstream projects, complete mounting systems are typically budgeted at around \$0.17 per watt on average, and specialised mounting manufacturers generally achieve blended gross margins in the range of roughly 15–30%, consistent with

competitive but still moderately differentiated hardware manufacturing.

The global Aluminium and Steel Solar Mounting Solutions market size was estimated at USD 20196.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
