Abstracts

Aluminium Oxide Copper (Al₂O₃-Cu), commonly referred to as alumina-copper or copper-alumina composite, is a metal matrix composite (MMC) material that combines a copper matrix with aluminium oxide (alumina) particles or fibers as reinforcement. This composite is engineered to leverage the high thermal and electrical conductivity of copper while significantly enhancing its mechanical properties, such as hardness, wear resistance, and strength at elevated temperatures, due to the dispersion of the ceramic alumina phase. It is widely utilized in applications requiring superior thermal management, electrical conductivity, and durability, including heat sinks, electrical contacts, brake systems, and high-performance electronic packaging, where traditional copper alloys may lack sufficient structural integrity or resistance to deformation under stress.

The global Aluminium Oxide Copper market size was estimated at USD 1545.3 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Aluminium Oxide Copper market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
