Abstracts

Aluminium plastic plate, also known as aluminium composite panel (ACP), is a flat panel consisting of two thin coil-coated aluminium sheets bonded to a non-aluminium core, typically polyethylene (PE) or a fire-retardant mineral-filled core. This composite structure combines the durability, weather resistance, and aesthetic versatility of aluminium with the lightweight, insulation, and cost-efficiency properties of the plastic core, making it a widely used material in architectural cladding, signage, interior design, and industrial applications. Its layered construction allows for flexibility in fabrication, ease of installation, and a range of surface finishes, including metallic, solid colour, wood, or stone patterns, achieved through coating or laminating processes.

The global Aluminium Plastic Plate market size was estimated at USD 1342.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
