Abstracts

Aluminium pressure cookers are specialized cooking vessels designed to cook food quickly by trapping steam, thereby increasing internal pressure and raising the boiling point of water. These cookers are constructed from aluminium, a material chosen for its excellent thermal conductivity, lightweight properties, and cost-effectiveness, making them particularly popular in price-sensitive markets. The design typically includes a locking lid with a pressure release mechanism, a gasket for sealing, and safety features such as pressure indicators or valves to prevent accidents. While modern alternatives like stainless steel or multi-layer cookware have emerged, aluminium pressure cookers remain relevant due to their affordability, efficiency in energy and time savings, and widespread use in both household and commercial kitchens, especially in regions where traditional cooking methods are being rapidly modernized.

The global Aluminium Pressure Cooker market size was estimated at USD 1350.82 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
