Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Aluminium Radiators competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of Aluminium Radiators reached approximately 15 million units, with an average market price of about USD 45 per unit, an annual production capacity of roughly 22 million units, and an industry-average gross margin of approximately 18%. Aluminium radiators are heat-exchange components primarily composed of aluminum or aluminum alloy, used in residential, commercial, and industrial heating or cooling systems. They exploit aluminum's excellent thermal conductivity and lightweight nature, often structured with fins or hollow cores to efficiently dissipate heat to the surrounding environment. Because of their rapid thermal response, design flexibility, corrosion resistance, and aesthetic appeal, aluminium radiators are increasingly replacing traditional steel or cast-iron radiators in modern HVAC systems. In the supply chain, the upstream includes aluminum material suppliers (plates, extrusions, alloying elements), casting/extrusion machinery and processing equipment vendors, and surface treatment chemistry providers (e.g. anodizing, electrophoretic coating, paint suppliers). The downstream is composed of HVAC equipment suppliers, central heating, underfloor heating or radiator installers, real estate developers, and end users. In terms of cost structure, raw aluminum accounts for ~40-50% of total cost, machining and labor plus depreciation ~15-20%, surface finishing and decorative treatments ~10-15%, assembly and quality testing ~5-10%, while sales & logistics (including packaging, transportation) consume ~10-15%. Regarding downstream consumption volume, in peak heating seasons, each residential or commercial building often installs multiple radiator panels to meet thermal load, making the residential market the largest share. Public buildings, commercial complexes, and industrial facilities also represent

significant demand sectors.

The global Aluminium Radiators market size was estimated at USD 675.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
