Abstracts

Aluminosilicate glass is a specialized type of glass composed primarily of aluminum oxide (Al₂O₃) and silicon dioxide (SiO₂), often with additional oxides such as magnesium, calcium, or boron to enhance its properties. It is distinguished by its high mechanical strength, exceptional resistance to scratches and chemicals, superior thermal stability, and excellent optical clarity. These characteristics make it particularly suitable for demanding applications where ordinary soda-lime or borosilicate glass would be inadequate. Common uses include smartphone and tablet screens, protective cover glass for electronic displays, high-temperature laboratory equipment, aerospace components, and specialized cookware. The material's durability also lends itself to applications in automotive glazing, medical devices, and architectural elements requiring high performance under stress or extreme conditions.

The global Aluminosilicate Glass market size was estimated at USD 7000.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
