Abstracts

Aluminum based coagulants, primarily aluminum sulfate (alum), polyaluminum chloride (PAC), and aluminum chlorohydrate, are chemical compounds widely used in water and wastewater treatment processes to remove suspended solids, colloidal particles, organic matter, and phosphorus through the mechanisms of charge neutralization and sweep flocculation. These coagulants are essential in municipal drinking water purification, industrial effluent treatment, and sludge dewatering due to their effectiveness, relatively low cost, and established performance in clarifying turbid water. The market for these products is driven by stringent environmental regulations, growing urbanization, increasing demand for clean water, and expansion of industrial activities globally, though it faces competition from alternative coagulants such as iron-based variants and organic polymers, as well as concerns related to aluminum residuals and their environmental impact.

The global Aluminum Based Coagulant market size was estimated at USD 1185.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Aluminum Based Coagulant market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
