Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Aluminum Casting Bar competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of aluminum casting bars will reach 18.18 million tons, with an average selling price of 2,917 USD/ton. Aluminum casting bars are aluminum rods that are formed by melting aluminum ingots into liquid aluminum (aluminum liquid) and then casting. The core process is to heat the aluminum ingots in a melting furnace to a molten state and form rods of specific specifications through continuous casting or semi-continuous casting. As a key raw material in the aluminum processing industry chain, cast rods are mainly used as billets for extrusion processes. After being processed by extrusion equipment, they can produce terminal products such as aluminum tubes, aluminum profiles, and aluminum plates. Their quality directly affects the subsequent extrusion molding efficiency and finished product performance.

The global Aluminum Casting Bar market size was estimated at USD 53031.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the forecast period.
