Abstracts

Aluminum dross machine refers to specialized industrial equipment designed to efficiently process and recover valuable metallic aluminum from dross—a byproduct formed during the smelting and refining of aluminum, typically consisting of oxides, nitrides, carbides, and entrained metal. These machines employ mechanical separation, cooling, and extraction techniques to maximize metal recovery while minimizing waste, often incorporating features such as rotary furnaces, cooling conveyors, crushing units, and sieving systems to handle varying dross compositions and improve operational safety by reducing the risk of explosions associated with hot dross handling.

The global Aluminum Dross Machine market size was estimated at USD 250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
