## Abstracts

Aluminum external blinds are window coverings made of aluminum materials and installed outside the building. They consist of an aluminum frame and aluminum louver blades. The blades are usually adjustable, and their angles can be changed through manual knobs or push rod motors connected to internal connecting rods. With an adjustable angle range of 0 to 105 degrees, the blades can achieve different functions. When the blades are at a 90-degree angle, maximum ventilation can be obtained. When the angle is between 15 and 25 degrees, it can effectively prevent peeping from outside. When the blades are fully closed, they can block rain and strong sunlight. Aluminum external blinds have the advantages of being lightweight, durable, corrosion-resistant, fireproof, and having good heat insulation and sound insulation performance. They can not only adjust ventilation, lighting and shading, but also enhance the aesthetic appearance of the building and protect the privacy of the interior.

The global Aluminum External Blinds market size was estimated at USD 2643.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
