Abstracts

Aluminum filler metal alloys are specialized welding consumables designed specifically for joining aluminum and aluminum alloy workpieces through various welding processes, including gas metal arc welding (GMAW), gas tungsten arc welding (GTAW), and others. These alloys are engineered to match or complement the base material's metallurgical properties such as strength, corrosion resistance, and thermal conductivity while accommodating aluminum's high thermal expansion and oxide layer challenges. Available in forms like wire, rod, and strip, they are categorized by series (e.g., 4xxx for silicon alloys, 5xxx for magnesium alloys) to suit specific applications, from automotive and aerospace manufacturing to marine and construction industries, where precise control over weld integrity, appearance, and performance is critical.

The global Aluminum Filler Metal Alloy market size was estimated at USD 5200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
