The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Aluminum Hydroxide for Cables competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Aluminum hydroxide, which appears as white powder and has no pungent odor, is the hydroxide of aluminum. Aluminum hydroxide is also an amphoteric hydroxide because it can react with acids to form salts and water, and can react with strong bases to form salts and water. Aluminum hydroxide has good stability and has certain corrosion resistance. Aluminum hydroxide filler is used in cables with three major functions: flame retardant, smoke elimination, and filling. It has no secondary pollution during combustion, has good thermal stability, is non-toxic, non-volatile, does not produce corrosive gases, produces less smoke, is rich in resources, and is cheap. It can produce a flame retardant synergistic effect with a variety of substances and has a good flame retardant effect. In 2024, global Aluminum Hydroxide for Cables production reached approximately 1456 K MT, with an average global market price of around US\$ 758 per MT. The annual production capacity of a single production line is about 20,000 tons, and the gross profit margin is about 20%. Upstream raw materials: bauxite, caustic soda (sodium hydroxide). Downstream: cable material manufacturers Terminal application areas: Construction field: Flame-retardant cables for building wiring (level B1, B2). Communication field: Flame retardant sheath for optical cables and data cables. Transportation: automotive wiring harness, marine cables, rail transit vehicle cables. New energy: photovoltaic cables, charging pile cables, cables for energy storage systems. Household Appliances: Internal Wiring. Direct material costs account for 60% - 70%; energy costs account for 15% - 20%; manufacturing expenses 10% - 15%.

The global Aluminum Hydroxide for Cables market size was estimated at USD 1103.0

million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
