Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Aluminum Hydroxide for Papermaking competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Aluminum hydroxide, which appears as white powder and has no pungent odor, is the hydroxide of aluminum. Aluminum hydroxide is also an amphoteric hydroxide because it can react with acids to form salts and water, and can react with strong bases to form salts and water. Aluminum hydroxide has good stability and has certain corrosion resistance. In the paper industry, aluminum hydroxide fillers are mainly used as surface coatings, fillers and in the production of non-combustible paper. Aluminum hydroxide filler has many advantages as a coating pigment: high whiteness, fine particle size and uniform particle size distribution. Using it as a pigment can improve the whiteness, opacity, smoothness and ink absorption performance of coated paper. Using aluminum hydroxide to replace titanium dioxide can save costs without reducing the whiteness of the paper. In 2024, global Aluminum Hydroxide for Papermaking production reached approximately 485 K MT, with an average global market price of around US\$ 653 per MT. The annual production capacity of a single production line is about 10,000 tons, and the gross profit margin is about 20%. Upstream raw materials: bauxite, caustic soda (sodium hydroxide), sulfuric acid/carbon dioxide. Downstream applications: Coated paper/coated paper: As a coating pigment, providing high whiteness, smoothness and printing gloss. Decorative base paper: used for artificial board veneer to provide hiding power, whiteness and flame retardancy. Raw material costs account for approximately 60% - 70% of the total cost; energy costs account for approximately 15% - 25% of the total cost; labor and manufacturing expenses account for approximately 10% - 20% of the total cost.

The global Aluminum Hydroxide for Papermaking market size was estimated at USD 316.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
