Abstracts

Aluminum hydroxide flame retardant is a commonly used flame retardant additive, which can provide flame retardant properties in materials and reduce the risk of fire. Aluminum hydroxide ($\text{Al}(\text{OH})_3$) is the most commonly used aluminum hydroxide flame retardant. Aluminum hydroxide flame retardants decompose at high temperatures to produce water vapor and aluminum oxides, which absorb heat and dilute the flame, thereby inhibiting the combustion process. At the same time, aluminum hydroxide can also form a protective layer to isolate the contact between the material and the fire source and slow down the spread of the fire. Aluminum hydroxide flame retardants are widely used in various plastics, rubbers and other combustible materials, including polymers, wires and cables, construction materials, electronic products, auto parts, etc. Adding aluminum hydroxide flame retardant can improve the flame retardancy of the material and make it meet the fire safety requirements. Growing demand for lightweight and refractory materials in the automotive industry for improved efficiency and design flexibility is the major reason for the growth of the plastics market. High-performance plastics provide manufacturers with design advantages and strength comparable to steel. As plastics and polymers are more prone to fire and aluminum hydroxide as the main flame retardant is the major factor driving the growth of the market. For health, safety and recycling reasons, the electrical industry is seeking alternatives to halogenated flame retardants. Aluminum hydroxide, a non-halogenated material designed specifically to meet these needs, will be used in a wide range of electrical applications such as insulating elements and housings for circuit breakers, contactors, transformers and electric motors. In terms of regional distribution, Asia Pacific is expected to be the largest consumer of flame retardants during the forecast period. The Asia-Pacific region is composed of major emerging countries such as China and India, therefore, there is a lot of room for development of most industries in the region, the aluminum hydroxide flame retardant market is growing significantly, providing

opportunities for various manufacturers, the region accounts for about 61.0% of the world's population, the region's manufacturing and processing industries are growing rapidly, the Asia-Pacific region is the largest aluminum hydroxide flame retardant market, of which China is the main market, is expected to grow significantly, the region's population is growing, can be The steady increase in disposable income has further increased the demand for construction, electronics and electrical appliances, and the automotive industry.

The global Aluminum Hydroxide Flame Retardant market size was estimated at USD 1146.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
