Report Overview

The Aluminum Intake Manifold is a piping system that connects the engine to the air filter. Its main function is to direct air into the engine combustion chamber, providing enough oxygen so that the fuel can be completely burned. Aluminum intake manifolds are generally lighter, stronger and more corrosion-resistant than cast iron manifolds, so they are widely used in high-performance engines and sports cars to increase engine power and performance. At the same time, the aluminum intake manifold can also reduce the overall weight of the vehicle and improve fuel economy.
