Abstracts

Aluminum Landscape Edging is a boundary protection and separation material used in garden landscape design, usually made of high-strength aluminum alloy. It effectively separates areas such as flower beds, lawns, roads, driveways, etc. by providing a strong and durable edge frame. Aluminum landscape edging is an ideal choice in modern gardening and landscape design because of its corrosion resistance, light weight, high strength and resistance to rust. It not only keeps the edges of the garden neat and uniform, but also prevents soil loss, lawn spread or weed growth, while improving the overall aesthetics of the landscape.

The global Aluminum Landscape Edging market size was estimated at USD 178.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
