Report Overview

Aluminum inner fiber wrapped bottle is a high-pressure gas cylinder with the characteristics of lightweight, high strength, corrosion resistance, high temperature resistance, and easy processing and molding. The bottle is lined with an aluminum alloy inner liner, and the outer layer is made of high-strength fiber winding composite material, usually carbon fiber or glass fiber reinforced resin matrix composite material. The aluminum inner liner can effectively prevent gas infiltration and leakage, while improving the stiffness and impact resistance of the bottle body. The fiber winding layer can withstand the force of high-pressure gas, ensuring the safety performance of the bottle body. Aluminum liner filament wound bottles are widely used in the field of gas storage and transportation, such as Industrial gas, special gas, medical gas, etc.

The global Aluminum Liner Fiber Wound Bottle market size was estimated at USD 385.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
