The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Aluminum Nitride Surface Modification Powder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Aluminum Nitride Surface Modification Powder is an advanced ceramic powder produced by applying surface modification techniques to aluminum nitride particles, aiming to improve interfacial compatibility and resistance to moisture and thermal degradation. It combines excellent thermal conductivity, electrical insulation, and chemical stability, making it suitable for the preparation of high-reliability thermal management materials. In 2024, the production of aluminum nitride surface modification powder reached 8,696 tons, with an average price of USD 23,000 per ton. Each production line has an annual capacity of about 100 tons, and the average gross profit margin is approximately 31%. The upstream sector mainly includes the supply of high-purity alumina powders and high-temperature reaction furnace equipment, with representative suppliers such as Alcoa, Sumitomo Chemical, and Baotou Rare Earth Group (China). The midstream stage covers high-temperature nitridation, surface modification, powder classification, and quality inspection processes, focusing on coating uniformity and interfacial bonding performance. Downstream customers primarily come from the aluminum nitride substrate, thermal conductive materials, and electronic thermal management sectors, with representative clients including Shinko, Kyocera, and China Sanhuan Material Technology (CSH).

The global Aluminum Nitride Surface Modification Powder market size was estimated at USD 200.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
