Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Aluminum Oxide Blast Media competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Aluminum Oxide Blast Media is an abrasive material made from high-purity aluminum oxide (Al_2O_3) grains, engineered for surface preparation, cleaning, deburring, and finishing of metals, composites, and ceramics. It is produced through the fusion of bauxite or calcined alumina in electric arc furnaces at high temperatures, followed by crushing, screening, and precision grading into specific grit sizes. In the supply chain, upstream activities involve mining and refining of bauxite into alumina; the midstream stage includes fusing, crushing, sieving, and surface treatment by manufacturers; and the downstream segment covers distribution to industries such as aerospace, automotive, construction, and electronics for sandblasting, coating pretreatment, and shot peening applications. In 2024, global Aluminum Oxide Blast Media output was about 1.85 million tons with a capacity of 2.3 million tons, priced at USD 820-2,200 per ton, and a 23% gross margin.

The global Aluminum Oxide Blast Media market size was estimated at USD 1742.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
