Report Overview

Aluminum is the main material to produce aluminum metals that are mostly used for construction and industries. Aside from being a great option to produce aluminum metal, aluminum oxide can be easily weakened by oxygen through a catalyze corrosion reaction. However, bonding oxygen with aluminum can create protective coating forms that could prevent corrosion from getting worse. The aluminum oxide sputtering target is a perfect combination to prevent metals from deteriorating. Aluminum oxide sputtering targets are also great for medical industries in producing medical equipment such as implants, tissue reinforcement, replacements for broken bones and labware. Protective armors for military industries are also produced using aluminum oxide sputtering targets to keep them strong and prevent oxidation. Aluminum oxide sputtering targets are excellent for high-temperature resistant components.
