### Report Overview

The term “Aluminium rolled products” is synonymous with the terms “flat rolled products” and “FRP” commonly used by manufacturers and third-party analysts in this industry. Aluminium rolled products are semi-finished Aluminium products that constitute the raw material for the manufacture of finished goods ranging from automotive body panels to household foil. There are two major types of manufacturing processes for Aluminium rolled products differing mainly in the process used to achieve the initial stage of processing: %li%“hot mills” that require sheet ingot, a rectangular slab of Aluminium, as starter material; and %li%“continuous casting mills” that can convert molten metal directly into semi-finished sheet. Both processes require subsequent rolling, which refer to as cold rolling, and finishing steps such as annealing, coating, leveling, or slitting to achieve the desired thickness, width and metal properties. Most customers receive shipments in the form of aluminium coil, a large roll of metal, which can be utilized in their fabrication processes.

The global Aluminum Rolled Plate market size was estimated at USD 98820 million in 2023 and is projected to reach USD 111964.23 million by 2030, exhibiting a CAGR of 1.80% during the forecast period.
