The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Aluminum Screws competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An aluminum screw is a fastener made from aluminum or aluminum alloy. Compared to steel screws, their main characteristics are light weight, good corrosion resistance (especially in moist or specific chemical environments), and excellent electrical conductivity. While aluminum screws generally have lower strength than steel screws, they are an ideal choice for applications that require reducing overall weight, avoiding magnetic interference, or providing corrosion protection in specific environments. They are commonly used in industries such as aerospace, electronics, sporting goods, and consumer products where lightweight design is essential.

The global Aluminum Screws market size was estimated at USD 894.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
