Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Aluminum Sheets,Strips and Foils competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.Aluminum sheets, strips, and foils are key categories of processed aluminum products made by casting, hot rolling, and cold rolling techniques to achieve various thicknesses and forms. Typically, sheets are flat, while strips and foils are coiled. These materials offer advantages such as light weight, high strength, corrosion resistance, excellent formability, and recyclability. They are widely used in sectors like transportation, construction, packaging, electronics, and home appliances, making them fundamental materials in modern industrial and consumer product manufacturing.The aluminum sheets, strips, and foils sector is currently in a stable and positive development phase, driven by broad-based demand from downstream industries such as packaging, new energy vehicles, batteries, construction, and home appliances. With the national focus on carbon neutrality, aluminum materials—characterized by light weight, recyclability, and environmental benefits—are increasingly replacing traditional materials as part of a green manufacturing system. However, the industry is also facing challenges such as regulatory constraints on energy consumption and emissions, cost pressure, and lingering overcapacity in low-end segments, which are affecting profitability and expansion plans for some companies. The industry is expected to continue evolving toward high value-added, high-performance, and low-carbon directions. Technological efforts will increasingly focus on the development and mass production of thinner, stronger, and more functional products to meet emerging demands in fields like EV battery casings, battery foils, high-end packaging, and 5G communications. At the same time, green manufacturing and the circular economy will become central themes, with rising adoption of recycled aluminum and low-carbon

processing becoming key competitive advantages. The global market layout will also diversify, with international expansion emerging as a strategic imperative for leading players. Key growth drivers include the continuous expansion of diversified downstream applications, strong global policy support for energy efficiency and emissions reduction, new technological opportunities for structural upgrades, and increasingly complete industry supply chains. In particular, sectors such as new energy and consumer electronics are fueling demand for high-spec aluminum products, serving as a catalyst for quality and efficiency improvements across the industry. On the flip side, the sector faces barriers such as volatility in raw material prices, tightening environmental regulations, elevated risks of trade friction, and intense homogeneous competition due to low industry concentration. The industry's sustainable growth will hinge on enhancing innovation, optimizing product portfolios, and strengthening resilience against global market uncertainties.

The global Aluminum Sheets,Strips and Foils market size was estimated at USD 136280.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
