Report Overview

The aluminum shell helium testing machine is an instrument used to detect the sealing performance of aluminum shell batteries. Its working principle is to put the battery into a vacuum chamber, then inject helium into the battery, using the low molecular weight and small molecule size of helium to penetrate into the cavity through tiny holes in the battery shell, and then use a helium mass spectrometer to detect the helium concentration in the cavity to calculate the battery leakage rate. The advantage of the aluminum shell helium inspection machine is that it can quickly, accurately and non-destructively detect the sealing of the battery, which is of great significance for improving the safety and life of the battery.
