Report Overview

Aluminum silicon carbide is a composite material of metal and ceramic. AlSiC (aluminum silicon carbide) is the abbreviation of aluminum-based silicon carbide ceramic particle reinforced composite material. The properties of AlSiC mainly depend on the volume fraction (content), distribution and particle size of SiC, as well as the Al alloy composition. According to the ratio of the two phases or the heat treatment state of the composite material, the thermophysical and mechanical properties of the material can be designed to meet various performance requirements of chip packaging. Aluminum silicon carbide composites have excellent mechanical and physical properties, and are widely used in aerospace and military, rail transit and automotive, electronics, military and other fields.
