Abstracts

Aluminum-based silicon carbide is a metal-based thermal management composite material composed of aluminum and silicon carbide. It is a special packaging material for electronic components. It mainly refers to the compounding of aluminum and high volume fraction of silicon carbide into low density, high thermal conductivity and low Encapsulation materials with coefficient of expansion to solve the problem of thermal failure of electronic circuits. AlSiC (aluminum-based silicon carbide) composite materials have excellent mechanical and physical properties and are widely used in aerospace & defense aerospace, rail transit & automobiles, electronics, military and other fields. Because aluminum-silicon carbide composite materials have important military value and a huge civilian market, their manufacturing process has always been blocked by foreign manufacturers as a confidential technology, and the market is monopolized by several major foreign manufacturers. CPS Corporation of the United States and DENKA Chemical Co., Ltd. of Japan are currently the two largest companies in the world that produce aluminum silicon carbide substrate products, occupying the vast majority of the market share in the aluminum silicon carbide industry. But as Chinese technology companies continue to develop, the gap is rapidly narrowing.

The global Aluminum Silicon Carbide (AlSiC) Products market size was estimated at USD 1234.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.60% during the forecast period.
