Abstracts

Aluminum tile trims are decorative and functional accessories mainly made of aluminum materials and used in tile installation projects. High-quality aluminum alloys are usually the main raw material, such as 6063 aluminum alloy, which is favored for its excellent extrusion performance, corrosion resistance, and surface treatment adaptability. Common surface treatments include anodizing, powder coating, and electrophoresis. Anodizing can enhance the wear resistance and corrosion resistance of aluminum tile trims, providing a variety of colors like silver white and black. Powder coating offers a rich color palette and good scratch resistance. Electrophoresis treatment can give the trims a smooth and bright surface with good adhesion and weather resistance.

The global Aluminum Tile Trim market size was estimated at USD 7958.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
