Report Overview

The Alzheimer's drug market focuses on pharmaceuticals designed to treat or manage symptoms of Alzheimer's disease, a progressive neurodegenerative disorder characterized by cognitive decline, memory loss, and behavioral changes. These drugs primarily target mechanisms such as beta-amyloid plaque reduction, tau protein inhibition, or neurotransmitter regulation (e.g., cholinesterase inhibitors like donepezil or NMDA antagonists like memantine). The market includes both FDA-approved treatments and experimental therapies in clinical trials, with growing emphasis on disease-modifying drugs that aim to slow progression rather than just alleviate symptoms. Key players include Biogen, Eisai, Roche, and Eli Lilly, while emerging biotech firms are advancing novel approaches like monoclonal antibodies and gene therapies. Demand is driven by aging populations, rising disease prevalence, and increasing diagnosis rates, though challenges persist in drug efficacy, high development costs, and regulatory hurdles. The market is poised for expansion with breakthroughs in precision medicine and biomarker-based early intervention strategies.

The global Alzheimer Drug market size was estimated at USD 1235.92 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.89% during the forecast period.
