Report Overview

The Alzheimer's therapeutics market focuses on developing and commercializing drugs to treat Alzheimer's disease (AD), a progressive neurodegenerative disorder characterized by cognitive decline, memory loss, and behavioral changes. Current therapies primarily target symptom management rather than disease modification, with acetylcholinesterase inhibitors (e.g., donepezil) and NMDA receptor antagonists (e.g., memantine) dominating the market. However, recent advancements in disease-modifying therapies (DMTs), such as monoclonal antibodies targeting amyloid-beta (e.g., aducanumab, lecanemab) and tau proteins, are reshaping the landscape. The market is driven by an aging global population, rising AD prevalence, and increasing R&D investment in biologics and precision medicine. Challenges include high clinical trial failure rates, regulatory hurdles, and the need for early diagnosis biomarkers. Emerging trends include gene therapies, anti-inflammatory approaches, and digital therapeutics for cognitive monitoring. The competitive landscape features major pharmaceutical players like Biogen, Eisai, Roche, and Eli Lilly, alongside biotech innovators exploring novel mechanisms. Pricing pressures, reimbursement complexities, and the demand for personalized treatment regimens further influence market dynamics.

The global Alzheimers Therapeutics market size was estimated at USD 5473.11 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.76% during the forecast period.
